FOUNDING PRACTICE PROPOSAL

RecallCall + Billy Be Good

Bring overdue patients back. Guide them after the visit.

RecallCall + Billy Be Good

> **One practical patient journey, split into two focused products.** RecallCall works the overdue-patient list before the visit. Billy Be Good turns the practice's existing take-home sheet into a private, personalized recovery guide after the visit.

FOUNDING RECALLCALL PILOT

$199 / month

Lifetime founding-member pricing for the first 25 practices. No setup fee, no annual contract, and a 10-appointment first-month guarantee, subject to the final pilot agreement and an eligible recall list.

The offer at a glance

PRODUCT	WHEN IT HELPS	WHAT IT DOES	PRACTICE OUTCOME
RecallCall	Before the appointment	Works the overdue-patient list, handles routine conversation, and advances interested patients toward a booking	More appointments without another front-desk calling block
Billy Be Good	After the appointment	Converts an approved take-home sheet into a private, day-by-day recovery guide	Clearer aftercare and fewer routine follow-up questions

The simple pitch

RecallCall: Your recall list is not going to call itself.

Give RecallCall an approved list of overdue patients. It works that list in the practice's voice, follows the contact rules the practice approves, and sends ready-to-book conversations back to the team for final confirmation.

Billy Be Good: A paper handout becomes a living recovery guide.

Send one existing take-home instruction sheet—even a clear photo. MidnightDev turns that approved source material into a branded guide that changes with the patient's procedure date and shows what to do, what may be normal, and when to call the practice.

Why the two products belong together

RecallCall solves the work practices struggle to complete **before** the visit. Billy Be Good improves the handoff practices already make **after** the visit. Neither asks the practice to replace its management system or rewrite its clinical instructions from scratch.

Product 1 — RecallCall

What the practice provides

- A signed Business Associate Agreement before real patient data enters the system
- An eligible patient-recall export with the minimum necessary fields
- The approved contact rules, calling windows, and escalation path
- A short note describing the practice's voice
- Final confirmation of appointment availability

What RecallCall does

1. **Works the list.** It contacts approved patients according to the practice's campaign rules.
2. **Handles routine conversation.** It answers within the approved scope and keeps interested patients moving.
3. **Hands off the booking.** The practice receives the patients who are ready for a final appointment confirmation.
4. **Reports the work.** The owner receives a concise briefing of contacts, responses, bookings, opt-outs, and projected value.

What remains human-controlled

- The practice approves the list and campaign rules.
- The practice confirms the final appointment.
- The practice handles clinical, urgent, unusual, or out-of-scope questions.
- The patient can opt out, and that preference must be honored immediately.

First-month guarantee

If RecallCall books fewer than 10 eligible appointments from the approved recall list during the first 30 days, the first month is refunded in full.

> **Guarantee language to settle before the pilot:** What counts as an eligible appointment, how cancellations are treated, the minimum qualifying list size, and the exact reporting source used to count bookings.

Product 2 — Billy Be Good

It starts with what the practice already has

The original Billy Be Good prototype began with a photograph of a veterinarian's take-home paper form. That same workflow translates directly to dental aftercare: the practice supplies its approved instructions, and the patient gets a clearer way to use them.

The conversion workflow

STEP	PRACTICE INPUT	PATIENT-FACING RESULT
1. Capture	Existing paper handout, PDF, or clear photograph	Source material is organized without changing its clinical meaning
2. Template	Procedure type, expected timeline, office contact path, approved red flags	A reusable, practice-branded recovery guide
3. Personalize	Procedure date and minimum necessary patient context	A private link showing the patient's current recovery day
4. Guide	Practice-approved revisions	Day-specific instructions, normal expectations, and clear escalation guidance

Good first templates

- Extraction recovery
- Implant post-operative care
- Root-canal aftercare
- Periodontal treatment home care
- First-week braces or wire guidance
- Clear-aligner onboarding

Safety boundary

Billy Be Good presents the practice's approved instructions. It does not diagnose, prescribe, improvise clinical guidance, or replace emergency and after-hours instructions. Each procedure template must be approved by the practice before a patient receives it.

> **The fastest pilot:** Choose one high-volume procedure and send the exact take-home sheet already used today. Build and approve one template before expanding to the next procedure.

> **Billy Be Good decisions:** Choose the first procedure template, confirm how long private links remain active, select the after-hours contact language, and choose whether pricing is per practice, per procedure template, or bundled into a higher RecallCall plan.

Proposed founding-practice pilot

Phase 1 — Approve the operating rules

- Confirm the qualifying recall list and patient-consent basis
- Complete the vendor, BAA, and data-flow review
- Approve calling windows, contact limits, opt-out behavior, and escalation paths
- Select the first Billy Be Good procedure and approve its source handout

Phase 2 — Review before launch

- Run a small RecallCall dry run with practice-controlled test contacts
- Review representative conversations and the staff handoff
- Review the Billy Be Good guide on desktop and mobile
- Correct source instructions and escalation language before any patient use

Phase 3 — Run the 30-day pilot

- Launch the approved recall campaign
- Send Billy Be Good only for the approved procedure template
- Review booking, opt-out, escalation, and aftercare-use signals
- Decide what to keep, revise, or stop at the end of the pilot

Pricing

ITEM	FOUNDING-PRACTICE PRICE	TERMS
RecallCall	**$199 / month**	Lifetime founding price for the first 25 practices; cancel any month
RecallCall standard price	$499 / month	Applies after the founding cohort
Setup	$0	Practice supplies the approved export and operating rules
Billy Be Good add-on	To decide together	Pricing model should follow the first template's scope and reuse

Included in the RecallCall founding pilot

- CSV-based recall-list intake
- Practice-voice configuration
- Approved contact sequence and escalation rules
- Booking-conversation handoff
- Owner briefing and basic outcome reporting
- First-month appointment guarantee, once the final eligibility rules are agreed

Explicitly outside the initial pilot

- Direct Dentrix, Eaglesoft, Open Dental, Curve, or other PMS integration
- Automatic calendar writes without staff confirmation
- Insurance eligibility or benefit verification
- New-patient lead generation
- Diagnosis, treatment advice, or emergency triage
- Custom Billy Be Good templates beyond the first approved procedure

Before real patient use

> The pilot does not accept real patient data until the BAA, vendor review, minimum-necessary data flow, retention rules, and practice approval are complete. The public landing page and demo-request form are not patient-intake tools.

Next conversation

Bring three things to a 20-minute walkthrough:

1. A rough count of overdue patients
2. The current recall workflow
3. One take-home instruction sheet worth turning into a Billy Be Good guide

The objective is to leave the call knowing whether RecallCall, Billy Be Good, or the combined pilot is the right next test for the practice.

Appendix — implementation and verification notes

This section is safe to skip. It records the technical and operating boundaries behind the proposal.

Current implementation status

- The responsive RecallCall and Billy Be Good sales experience is implemented as a working Next.js prototype.
- The ROI calculator, nightly briefing sample, FAQ, and two-product demo selector are functional in the prototype.
- The demo form currently ends in a local confirmation state; lead delivery and scheduling are not connected yet.
- The production calling workflow, practice onboarding, patient-data controls, reporting backend, and deployment configuration remain pilot implementation work.
- Search indexing remains disabled while names, domains, and launch claims are provisional.

Required production controls

- Practice-level data isolation and least-privilege access
- Signed BAAs with the practice and relevant vendors
- Patient-consent attestation and suppression-list enforcement
- Contact windows, frequency caps, and immediate opt-out handling
- Human escalation for clinical, urgent, ambiguous, and out-of-scope conversations
- Audit trail for list approval, outreach, opt-outs, handoffs, and template revisions
- Practice approval and version history for each Billy Be Good procedure template
- Private, time-bounded patient links using the minimum necessary information

Name and claim clearance

RecallCall and Billy Be Good remain provisional names until domain, trademark, company-name, and social-handle checks are complete. Public claims and the 10-appointment guarantee require final operating definitions before launch.
